

# BANNERBUG

One of the leading display systems on the market, the BannerBug provides a sleek, sophisticated and portable means through which to convey your message.

- Sleek and professional appearance
- Single or double sided banner stands
- Non reflective finish
- Easy to assemble (rolls up in seconds)
- Lightweight and compact
- Full colour sigmagraf banners
- Printing resolutions of up to 720dpi

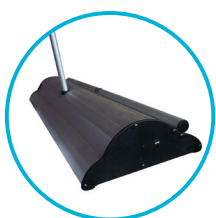

The BannerBug display unit features a retractable banner, which is stored in a compact yet sturdy aluminium stand. The single supporting pole, which attaches to the top of the banner is effortlessly assembled and allows the banner to be erected with ease.

Available in single and double-sided options, the BannerBug comes in widths of 850mm, 1000mm, 200mm and 1500mm (1500mm not available double sided). The double sided BannerBug features two banners that are installed separately giving you the flexibility to install and change banners as your needs change.

The BannerBug banners are printed on a synthetic media called Sigmagraf. A product used by bytes 'n colours that is comprised of clear polyester with a blocklite backing. Images are printed on the reverse side of the Sigmagraph and backed with vinyl to stop light from penetrating the image. This results in images being fully protected from scratching and marking.

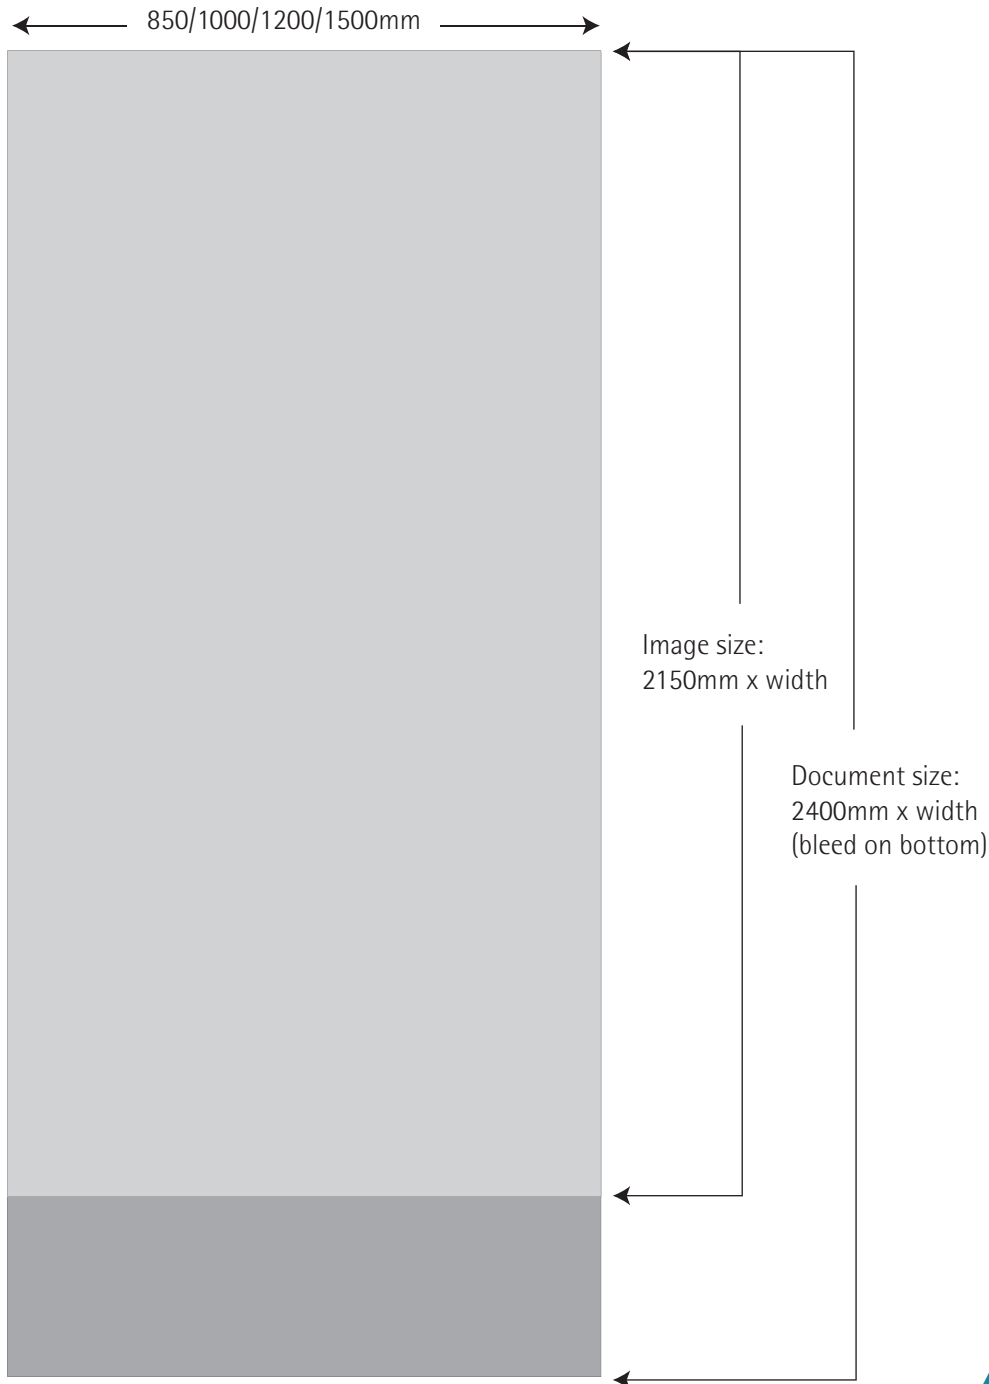

All our banners are printed on state of the art printers that have excellent colour reproduction and resolution capabilities. They produce banners of outstanding quality that do not curl or warp over time.

Also available is the DeskBug (220mm x 510mm visible area) and the BabyBug (580mm x 1520mm visible area). The BannerBug is a relatively light-weight system and comes with a padded nylon carry case with shoulder strap. The system can be transported by a single person with ease.
